By Charles Darwin:

On The Origin of Species

The Autobiography of Charles Darwin

The Descent of Man
The Expression of the Emotions in Man and Animals
The Voyage of the Beagle

The Galapagos Islands area situated in the Pacific Ocean some 1,000 km from the Ecuadorian coast. This archipelago and its immense marine reserve is known as the unique "living museum and showcase of evolution". The islands are surrounded by the Galapagos Marine Reserve which was created in 1986 (70,000 km²) and extended to its current area (133,000 km²) in 1998, making it one of the largest marine reserves in the world. Explore the Galapagos Islands with one of our amazing tours. Cruise, dive, island hop, stay in a hotel and explore nearby islands -- choose how you want to experience the Islands! Don't forget, Galapagos Travel Center is here to help you customize your perfect trip . Galapagos Cruises. Next (Galatians, Epistle to the). The Galapagos Islands (Spanish names: Islas de Colón or Islas Galápagos, from galápagos, "saddle"- after the shells of saddlebacked Galápagos tortoises) are an archipelago made up of 13 main volcanic islands, six smaller islands, and 107 rocks and islets. The oldest island is thought to have formed between five and ten million years ago, a result of tectonic activity. The youngest islands, Isabela and Fernandina, are still being formed, with the most recent Our Island-by-Island guide is the best resource for providing a wealth of information about each of the 13 major islands and 7 smaller islands that make up the Galapagos archipelago. Click on an island name from the list to the right of the map above and learn about its unique history, potential visitors sites, current conservation challenges and more! Connect with us. Latest News. New Book "Galapagos Giant Tortoises" Documents Decades of Insights. The Galapagos Islands are a small archipelago of islands and part of Ecuador in the eastern Pacific Ocean. The islands are quite remote and isolated, lying some 1000 km (620 miles) west of the South American continent. The Galapagos archipelago consists of 13 main islands and 6 smaller islets, a total land mass of about 7900 sq km (4900 sq ml). The Galapagos National Park comprises about 97% percent of the land mass of the islands. Less than 1% of the islands is permanently inhabited and another
