Its actual speed, therefore, may be faster or slower than that of t he generator; but it is 55 said to be synchronous so long as it preserves the same relative speed. In carrying out my invention I construct a motor which has a strong tendency to synchronism with the generator. The construe-60 tion which I prefer fot this is that in which the armature is provided with polar proiec- (tions. The field-magnets are wound with two sets of coils, the terminals of which are connected to a switch mechanism, by means of 65 which the line-current may be carried directly through the said coils or indirectly through paths by which its phases are modified. To start such a motor, the switch is turned onto a set of contacts which includes in one motor-70 circuit a dead resistance, in the other an...

The Nikola Tesla patents AC power transmission is the transmission of electric power by alternating current. Usually transmission lines use three phase AC current. In electric railways, sometimes single phase AC current is used as traction current for railway traction. Further reading Edit. Tesla's patents and theoretical work formed the basis of modern alternating current (AC) electric power systems, including the polyphase power distribution systems and the AC motor, with which he helped usher in the Second Industrial Revolution. Born an ethnic Serb in the village of Smiljan, Vojna Krajina, in the territory of today's Croatia, he was a subject of the Austrian Empire by birth and later became an American citizen. Nikola Tesla invented ways to transmit electrical energy over a single wire, through the atmosphere, and through the earth. Read all about it here! Nikola Tesla's Transmission Systems. My previous writings have laid the foundation needed to understand this article, in which I will give a brief overview of how the current power grid evolved, and how Tesla planned to radically change this. Evolution of electric power transmission. In the beginning there was direct current, or DC. Plaque at the Niagara Falls hydroelectric power plant, showing 9 Tesla patents. The Tesla / Westinghouse AC system was used in 1893 to power the entire Chicago World Fair, and in 1895 this dynamic duo created the first large-scale hydroelectric power plant in the US at Niagara Falls.
