Bird Brains presents these bright, brassy, and surprisingly colorful birds in a remarkable collection of full-color, close-up photographs by some two dozen of the world's best wildlife photographers. Savage's lively, authoritative text describes the life and behavior of sixteen representative corvid species that inhabit North America and Europe. Drawing on recent research, she describes birds that recognize each other as individuals, call one another by "name", remember and relocate thousands of hidden food caches, engage in true teamwork and purposeful play, and generally ...<sup>^</sup> "Here is an excellent gathering of intelligence, expert opinion and bird observations, with color photos creating a lavish backdrop." <sup>^</sup> Bookwatch. See details and exclusions - BIRD BRAINS. See all 11 brand new listings. Buy it now.

Bird intelligence was launched into the limelight by Irene Pepperberg and Alex (although many scientists denigrated her work when it was first published). Irene Pepperberg is an American scientist who initially studied chemistry, gaining her PhD in chemical physics before she found her true calling and became fascinated with language learning in birds. The leaders in the novel activity table were, unsurprisingly, the corvids (crows, ravens, magpies and jays etc.). Up at the top with them were the parrots, followed by grackles, raptors, woodpeckers, hornbills, gulls and herons. Scientists that study bird intelligence take two basic approaches. The first involves anatomical studies of brains, measuring, counting and testing the actual physical source for intelligence. It feels like there should be a fable about this. Perhaps "How the crow learnt to mak Crows, ravens, jays, magpies, nutcrackers, treepies, and choughs have turned "you're a birdbrain" into a compliment. The world's smartest birds are smarter than you think! The American Crow, however, is just the smartest in a whole family of whip-smart birds. The family, Corvidae, consists of ravens, rooks, jays, nutcrackers, magpies, jackdaws, choughs, and treepies. Crows are second only to humans in intelligence. Their brain-to-body weight ratio is equal to that of the great apes and cetaceans (whales, dolphins, porpoises). In some research tests, they're smarter than apes and only slightly less than humans! Crows can make and customize tools, reason, understand causality, count up to five and remember human faces. Bird Brains presents these bright, brassy, and surprisingly colorful birds in a remarkable collection of full-color, close-up photographs by some two dozen of the world's best wildlife photographers.
