Environmental sustainability is talked about in relation to all aspects of our lives – from creating eco homes and environmentally conscious communities to sourcing sustainable food, renewable energy, low impact furniture and clothing. The concept of sustainable development was first put forward in the 1987 report “Our Common Future”™ – prepared for the World Commission on Environment and Development. They recognized the links between environmental sustainability and its importance, the sustainability of energy resources such as wind and solar power compared with oil and gas.
