Butterfly ranching in Papua New Guinea - -

Butterfly ranching in Papua New Guinea is a method for sustainable use of insect biodiversity endorsed and supported by the national government.

Papua New Guinea is an island country located in the southwestern Pacific Ocean. The official name of the country is the Independent State of Papua New Guinea. Papua New Guinea occupies the eastern half of the island of New Guinea the second largest island in the world. As well as the mainland, PNG also encompasses over 600 small islands and archipelagos. Its mainland is bordered by Indonesia. Papua New Guinea has several volcanoes, as it is situated along the Ring of Fire. Volcanic eruptions are not rare, and the area is prone to earthquakes and tsunamis because of this. Papua New Guinea has 5,150 kilometers (3,200 miles) of coastline. Papua New Guinea is surrounded by coral reefs which are under close watch, in the interests of preservation. The population of Papua New Guinea is a little over 8 million. They are descended from the Austronesians, or the neighboring southeastern countries, and from the Melanesians, or Vanuatu, Solomon Islands, and Fiji. The indigenous people are called Papuans, and the locals and people living in the urban areas are called Papua New Guineans. The Pacific war, the Asian part of the World War II where Japan is the Asian version of Germany, was waged in Papua New Guinea too. It was called the New Guinea campaign. Japanese forces, then known as the Empire of Japan, invaded the island early in 1942 and were camped there until their surrender three years later. New Biological Books. Reviews and Brief Notices. The Butterflies of Papua New Guinea: Their Systematics and Biology. Michael Parsons. Stephen J. Richards. Michael Parsons , " The Quarterly Review of Biology 76, no. 1 (Mar., 2001): 88-89. <https://doi.org/10.1086/393801>. MOST READ. Of all published articles, the following were the most read within the past 12 months. Polydactyly in Development, Inheritance, and Evolution. Lange et al. Rethinking the Theoretical Foundation of Sociobiology.

New Guinea, the world's second largest island, lies at the heart of the Australasian centre of species diversity. Their remarkable faunal richness of the region is no more spectacularly evident than in its bewildering and beautiful array of butterflies. Michael Parsons draws on 15 years of study to present a comprehensive description of this butterfly fauna, describing and celebrating their evolution and ecology. New Guinean butterflies provide an excellent example of how a single animal group can The butterflies of Papua New Guinea: Their systematics and biology Butterflies of Micronesia Agricultural Experiment Station Contribution No. 216. Jan 1997. M J Parsons.Â Butterflies of the Solomon Islands: Systematics and biogeography. Jan 2002. W J Tennent. Tennent, W. J. 2002. Butterflies of the Solomon Islands: Systematics and biogeography. Storm Entomological Publications, Norfolk, England. Some new records of butterflies (Lepidoptera, Papilionoidea) from New Caledonia, including a new species of Theclinesstes. The rainforests of West Irian, Papua New Guinea and surrounding islands are home to some of the most spectacular butterflies on Earth including the glorious Ornithoptera Birdwings. The links above lead to Thumbnail pages for the relevant butterfly families. Papilionidae. Ornithoptera alexandrae. Ornithoptera tithonus. Cressida cressida. Graphium weiskei. Pieridae.

-CHOICE (July 1999) "Papua New Guinea has a butterfly fauna amounting to some 820+ species and they are all covered by this work. The introduction is extensive. The butterflies of PNG include some of the largest and most magical butterflies in the world and Dr Parsons has researched his subject thoroughly for more than 15 years, and was a senior entomologist in the Wildlife Division in Papua New Guinea from 1979 - 1984. The book is divided into two parts plus an extensive bibliography, a glossary, index, line drawings, (selected) genitalia, 11 appendices, 57 text figures, 8 tables and 136 colour photographs, including 32 of early stages (the photograph of a fully grown Queen Alexandra's Birdwing caterpillar on a man's hand is awesome). The island of New Guinea contains thousands of insect species many of which are eagerly sought by collectors, especially in USA, Germany and Japan. In PNG, out of the 820 known butterfly species, 55% are endemics including the world's largest butterfly, *Ornithoptera alexandrae*. DEC, which is responsible for export permits, is also willing to provide assistance, as is the Department of Biology at University of Papua New Guinea. With the resources of this Darwin Initiative project, we believe the potential exists to establish (1) researched guidelines for better and more coordinated policies, and (2) more effective practices by the insect purchasing agencies, in order to generate more substantial rural income benefits and sustainable biodiversity outcomes. During several voyages up Papua New Guinea's largest river, the Sepik, I have never ceased to be amazed by the most remarkable examples of body scarification imaginable. In reverence to the crocodile spirit young male initiates enter wooden and thatched spirit-houses called tambaran to learn how to become a man. Ever since they have been scaring enemies and tourists alike on their way to becoming one of Papua New Guinea's most popular performing cultures. 4: The Huli Wigmen. "They looked extraordinary and almost vain although in fact they are fierce warriors." Naucoridae (Heteroptera) of New Guinea. 6. A Revision of the Genera *Sagocoris* and *Aptinocoris*, with Descriptions of New Species. Naucoridae (Heteroptera) of New Guinea. 6. A Revision of the Genera *Sagocoris* and *Aptinocoris*, with Descriptions of New Species (pp. 331-371). Dan A. Polhemus and John T. Polhemus. <https://www.jstor.org/stable/25010325>. Cite this Item. The Butterflies of Papua New Guinea: Their Systematics and Biology by Michael Parsons. The Butterflies of Papua New Guinea: Their Systematics and Biology by Michael Parsons (pp. 409-413). Review by: Andrew V. Z. Brower. <https://www.jstor.org/stable/25010330>. This is a list of butterflies of Papua New Guinea. This list includes species recorded from mainland Papua New Guinea, but also all islands that are part of the country, such as the Trobriand Islands, the D'Entrecasteaux Islands, the Louisiade Archipelago and the Bismarck Archipelago. *Chaetocneme antipodes antipodes* (Guérin-Méneville, 1831). *Chaetocneme antipodes biaka* (Joicey & Talbot, 1916). *Chaetocneme caristus* Hewitson, 1867. *Chaetocneme critomedia* (Guérin-Méneville, 1831).
