Human Physiology is an international peer reviewed journal aimed at promoting the integration of theory, methods, and research in human physiology. The journal publishes original studies on brain function and its disturbances, including neural mechanisms subserving perception, learning, memory, emotion, and language. Human Physiology provides a forum for many areas of physiology, such as respiration, circulation, the blood system, motor functions, and digestion, as well as sport and occupational physiology. Thus, human physiology deals specifically with the physiological attributes of the human body at various levels of organization, i.e. from cellular to tissue and ultimately, physiology at the biological system level. Human physiology is important because it imparts an in-depth understanding of the vital processes that the body does so as to attain the utmost goal of maintaining homeostasis. Objectives. To fully understand the mechanisms of human physiology. Human Physiology. by Wikibooks contributors. £ Human physiology is the study of the functioning of the normal body, and is responsible for describing how various systems of the human body work. Explanations often begin at a macroscopic level and proceed to a molecular level. In 1926, Fritz Kahn portrayed the body as a complex chemical plant, as seen in the painting on the right.
