Flashcards.Â Research is a systematic search for answers to questions using a clearly specified process for gathering and analyzing data. It is empirical (i.e., derived from experiment, observation, or experience). What are the three interrelated phases of research? 1. Planning- Determine the issues and research questions; select measures; select an appropriate design; develop a data collection strategy and instruments 2. Doing- Gather the data; analyze the data; verify the accuracy of the data and analysis; and formulate the findings. vi Edinburgh Business School Research Methods for Business and Management. Research in Public Administration. primarily an American idea that grew out of the late nineteenth-century movement for government reform, the scientific management theories of Frederick Taylor et al. and the new discipline of political science. They are administrators who operate in the public sector and are involved in all of those activities that are necessary for the smooth operation of departments, programs and activities that are the outcomes of policy decisions made by the bodies politic. Formal education for public administration was part of the French system in the eighteenth century where professional schools were developed to provide qualified technicians for public service. Magazine article Policy & Practice of Public Human Services. Research Methods for Public Administrators. By Johnson, Gail. Read preview. Magazine article Policy & Practice of Public Human Services. Research Methods for Public Administrators. Research enables public officials to engage in a rational approach to decision-making. A rational approach assumes that decisions are based on an accurate picture of the problem and the likely consequences of various remedies. The truth depends upon the ability of public administrators to objectively gather accurate data and interpret information. Research Methods for Public Administrators helps administrators do that. The book informs the political debate and contributes to policy formulation and program management. For public administration research, the goal of supervised learning techniques is to replicate human classification or measurement of some outcome where the general rules regarding how the outcomes were measured are unclear or incomplete in some sense. A canonical example of this is sentiment analysis, such as identifying whether documents contain positive or negative sentiment toward a product like a film. Sometimes the researchers combined the quantitative and qualitative research methods in order to relate the research findings from different perspectives. Historically, methodological series were created based on content analysis, which allowed researchers to quantify narratives (Whicker & Lynn, 1998). Johnson makes clear that to succeed in any public agency management position, you have to be able to think analytically and know how to assess the quality of research results. By providing the underlying concepts and just enough methodology to operationalize them, she gives you exactly what you need--in a clear, straightforward way that takes the fear out of learning. You will find here an especially wide range of practical guidelines and examples, all from the author's own and others' experiences in a variety of settings within the public sector. Throughout her book she emphasizes t
